After Substantial Completion, if Contractor shall neglect, refuse, or fail to complete the remaining Work within the Contract Time or any proper extension thereof granted by Owner, Contractor shall pay Owner \$150 for each day that expires after the time specified in Paragraph 4.02 above for completion and readiness for final payment until the Work is completed and ready for final payment.

## Montgomery County Moody Road Bridge Replacement Bid Questions and Answers

1. Has there been an ACM study done on the existing structure? If not how will this be handled.

An addendum will be issued. "For bidding purposes, the Owner assumes no asbestos-containing materials are present within the project limits and bidders shall not include costs for asbestos testing or abatement in their bids; the County will perform a separate ACM assessment prior to demolition or disturbance of existing bridge components, and if ACM is identified, the County will be responsible for abatement by change order or separate contract."

2. There is an existing fence attached to the bridge. How will this obstruction be handled in the contract?

Alex to reach out to the property owner to determine path forward.

3. There is Dry Excavation set up in the contract. Even though there is not a Datum Elevation on the plans there is base flow in the creek. Will wet excavation be added in accordance with TDOT spec for material below the base flow water elevation.

Yes, wet excavation will be added in the addendum.

4. Will rock test holes be required to sound the rock below the drilled shaft foundation, and if so will an item be added for this activity.

Rock test holes will not be required.

5. As per TDOT Spec, a substructure foundation that extends below the water elevation has to have special work for foundation preparation. Will items for this work be added accordingly?

Foundation preparation pay item will be added in the addendum.

6. As per the geotechnical report, seams may be present in the drilled shafts. These seams could inject water under pressure if the hole is dewatered resulting in piping in the SCC concrete. Would it be prudent to set the shaft concrete up as TDOT Class S instead of SH-SCC to accommodate the need to place concrete under water.

No. TDOT design requirements as seen in SDG-8-201.00 Materials, SH-SCC concrete is required for drilled shafts. Class "S" concrete is intended for use in foundation seals and is not appropriate for use in drilled shafts.

7. Can the quantities for the following items be verified It appears they may be doubled, they are shown on stage 1 & Stage 2 ESPC plans,

209-08.05 Enhances Silt Fence Check

208-08.08 Enhanced Rock Check

209-08.09 Filter Sock Check Dam

209-09.03 Sediment Filter Bag

EPSC quantities to remain as the EPSC plans are staged; therefore, replacement may be required.

8. There are 2 unit price schedules in the bid manual.

Unit prices were correct in 00 41 13 Bid (Unit Price) specification. The unit price schedule was not updated within 00 52 13 Agreement specification. All unit prices have been updated within the addendum.
