

**Bi-County Solid Waste Management
Creek Rock Bid
Questions and Answers**

- 1) Has Bi-County ever bid on a creek rock project like this in the past?
Yes. I believe around 2021.
- 2) How many Loads per day will be expected?
We are not expecting any certain amount of loads per day. The overall goal is to get the required tonnage/loads.
All stone must be delivered by August 1st.
- 3) When is the commencement and Finish date for this project?
Commencement: Once Bid Is Awarded and Test Results come back. Estimated First of June 2025.
Finish: August 1, 2025
- 4) Who is doing the testing on the rock?
UES/Geoservices. – This should not matter as Bi-County will be sending samples off.
- 5) Will trucks have to wait on Bi-County Scales or will they be able to come in and dump?
No. The reason we are bidding it by load is so the trucks can come in and dump without going through scale line.
- 6) The average triaxle now carries at 21.5 ton load while others can carry 27 ton loads. Can this bid be changed to a per ton delivered price vs the per load price?
Preferably not this late in the bidding process.
Should a bidder use a larger truck and be able to carry a larger load, please specify the size of the truck and tonnage a full load would be.
